DETAILED ACTION

Election/Restrictions

1. This application contains claims directed to the following patentably distinct species of the claimed invention:

Claims directed to embodiment species of the invention as shown in figure(s):

- I. Figure1
- II. Figure 2
- III. Figure 3
- IV. Figure 4.
- V. Figure 9.
- VI. Figure 10.

Claims directed to the species of the sensors presented and claimed.

For the first sensor.

- 1. a density sensor
- 2. a percent solids sensor
- 3. a particle counter
- 4. a pH sensor
- 5. a conductivity sensor
- 6. an oxidation and reduction potential sensor
- 7. a refractive index sensor.

For the second sensor.

1. a density sensor

Art Unit: 1723

- 2. a percent solids sensor
- 3. a particle counter
- 4. a pH sensor
- 5. a conductivity sensor
- 6. an oxidation and reduction potential sensor
- 7. a refractive index sensor.

Note: If applicant desires an examination of the sensor being any of the "combinations thereof (the sensors enumerated as 1-7 above)", applicant must clearly state on the record that all the species of sensors enumerated 1-7 are "obvious variants over one another".

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species of the invention and the subspecies of the sensor for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable.

Currently, claim 1 appears to be generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims

Art Unit: 1723

are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

A written requirement is made so as to provide the applicant a period for review of this requirement between the six species presented, review the claims in light of a species election and construct a fully response to this requirement in a timely manner.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

2. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tony G Soohoo whose telephone number is (703) 308-
